Radiator Cleaner 250ml

£14.99

Uses / Areas of Use:

- If the cooling system becomes contaminated after an engine repair, e.g. oil residues in cooling system due to cylinder head damage.
- In event of deposits forming in cooling circuit.
- Can be used preventively whenever the coolant is changed.

Application

Add contents of can to coolant. Open heater valves. Run engine for about 30 minutes. Deposits which have been dislodged by the radiator cleaner must be flushed away without fail. Flushing can be carried out without removing the thermostat. Replace coolant after use, bleed and check for leaks. It is recommended to replace parts that have been affected by intruding oil, such as the expansion tank and water hoses.
